

Preparation for your upcoming Enhanced Workplace Hygiene service

What service is being done?

An Enhanced Workplace Hygiene service will be conducted to reduce contamination by sanitising equipment and surfaces.

Each workstation will be cleaned and sanitised, especially touch points like monitors, keyboards, and phones. The equipment will be vacuumed and surfaces treated with a biological sanitiser.

Additional protection

Your workplace may have elected to add additional touch points like door handles, push plates, vending machines etc.

Areas such as boardrooms, hot desks and meeting rooms may also be included.

Prior to the service

To ensure maximum sanitisation of surfaces, please:

- Turn off or lock desktops/laptops
- Clear workstation surfaces of food items, paperwork and ensure loose items are removed and packed away safely
- Secure all personal items
- Carry out housecleaning processes prior to the service
